

I'm still getting my features together, passed some dataframe cleaning milestones. I'm trying to see if number award winning actors working on a particular film has any relation to the success of the movie. Im specifically interested in if there is a difference between if actors actually won, were just nominated, and if they type of award matters eg Oscar best actor vs supporting actor or Oscar best actor vs golden globe.

Below is my dataframe soon to be modeled.

Out[60]:

	Actor	Golden Globe Best Actor Drama nomination	Golden Globe Best Actor Musical or Comedy nomination	Golden Globe Best Supporting Actor nomination	Golden Globe Best Supporting Actress nomination	Golden Globes Best Actress Comedy or Musical nomination	Golden Globes Best Actress Drama nomination	Oscar Best Actor nomination	Oscar Best Actress nomination
0	AaronEckhart	0.0	1.0	0.0	0.0	0.0	0.0	0.0	0.0
1	AbbeyLincoln	0.0	0.0	0.0	1.0	0.0	0.0	0.0	0.0
2	AbigailBreslin	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0
3	AdamSandler	0.0	1.0	0.0	0.0	0.0	0.0	0.0	0.0
4	AdolphCaesar	0.0	0.0	1.0	0.0	0.0	0.0	0.0	0.0
